Specifications

Engine

Model	ISUZU 6HK1
Type	4-cycle, Water-cooled, Direct injection, Turbo-charged, Diesel engine
Displacement	7.79 liters
Rated Output	200.6 kW / 1,850 min ⁻¹ (272 ps / 1,850 rpm)
Fuel Tank Capacity	460 liters
Notes	Engine meets Tier 3 / Stage IIIA of engine exhaust gas emission regulations . Engine rated horsepower is based on international rating formula that includes engine alternator and without fan.

Control

Control System	Main actuators are actuated by main hydraulic system controlled with pilot hydraulic system. Safety devices are securely operated by combined various electronic control with hydraulic system. Working speed can be precisely controlled according to control lever stroke and control dials depending on work.
Control Levers	Designed and positioned based on ergonomics. Armchair lever type is standard. Cross operation lever type and front lever type are available as option.
Display Panel Design	8 inches size. Located to check work state easily without disturbing the view of the operator.

Hydraulic System

Hydraulic Oil Tank Capacity	320 liters		
Hydraulic Pump Capacity	Max.	31.4 MPa	
	P1	266 liters / min	for Front, Rear , boom hoist winch and travel
	P2	266 liters / min	for Front, Rear , third winch and travel
	P3	152 liters / min	for Swing, Jack and Sideframe connect
	P4	38 liters / min	
	P5	38 liters / min	Pilot control, Brake cooling,
	P6	38liters / min	Reeving tagline, etc
	P7	30 liters / min	

Winch

Front and Rear Winch				
Winch		Front	Rear	
Rope Diameter		26 mm	26 mm	
Rope Length	Standard	285 m	160 m	for Aux. sheave
	Winding Capacity	-	195 m	for Crane jib
Line Pull	Rated	360 m	360 m	
		117 kN	117 kN	
Standard Equipment		High-speed winching is possible by ECO winch mode with low engine speed under light loads.		
Optional Equipment		Free fall winch with brake controlled by pedal operation.		
Boom Hoist Winch				
Rope Diameter		22.4 mm		
Rope Length	Incorporated	195 m		
Hydraulic motor with multi-disc brakes.				

Third Winch(Optional)

Rope Diameter	26 mm	
Rope Length	Standard	220 m
	Winding Capacity	220 m
Line Pull	Rated	117 kN
Free fall winch with brake controled by pedal operation.		

Swing System

Consisted of 2 hydraulic motors with reduction gear and multi-disc brakes and a swing bearing which has inner tooth. Optional swing brake pedal enables operator to control swing precisely.

Mast

Mast is box structure. Easy assemble for front attachment.

Counter Weight

Upper Weight	Total Weight	49.6 ton
	9.1 ton Base Weight	1 piece
	8.1 ton Insert Weight	5 pieces

Carbody Frame

Welded steel construction with jack up develope and crawler sideframe connect cylinders.

Crawler Sideframe

Frame	Welded steel box construction. Hook on and joint pin design for crawler sideframe connection to carbody frame.	
Crawler Shoe	Cast iron 965mm width flat shoe each side.	
Upper Roller	5 pieces each side.	
	Double flange type : 3 pieces	
	Single flange type : 2 pieces	
Lower Roller	11 pieces each side.	
	Forging heat treated steel with double flange type. 2 plane bearing with floating seal for lifetime lubrication.	
Travel Device	1 peace each side.	
	Hydraulic travel device (Hydrayulic motor and reducer)	
	Travel speed (Gradability : 30%)	High : 1.5 km/h Low : 0.9 km/h

- The rated loads are determined according to EN13000 rating with the machine on firm level ground.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- To calculate the maximum load that can actually be lifted, deduct weight of all lifting accessories, such as boom hook and jib hook, from figures shown above.
- Working radius is the horizontal distance from the slewing center to the center of gravity of a lifted load.
- The counter weight is 49.6 ton.
- Correlation between the number of reeved lines, maximum rated loads, hook weights are shown in the table below.

- The rated loads are determined according to EN13000 rating with the machine on firm level ground.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- To calculate the maximum load that can actually be lifted, deduct weight of all lifting accessories, such as boom hook and jib hook, from figures shown above.

- Working radius is the horizontal distance from the slewing center to the center of gravity of a lifted load.
- The counter weight is 49.6 ton.

- The rated loads are determined according to EN13000 rating with the machine on firm level ground.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- To calculate the maximum load that can actually be lifted, deduct weight of all lifting accessories, such as boom hook and jib hook, from figures shown above.
- Working radius is the horizontal distance from the slewing center to the center of gravity of a lifted load.
- The offset angles shown are of jib boom offset angle against the main boom, under load.
- The counter weight is 49.6 ton.
- Correlation between the number of reeved lines, maximum rated loads, hook weights are shown in the table below.

- The rated loads are determined according to EN13000 rating with the machine on firm level ground.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- To calculate the maximum load that can actually be lifted, deduct weight of all lifting accessories, such as boom hook and jib hook, from figures shown above.
- Working radius is the horizontal distance from the slewing center to the center of gravity of a lifted load.
- The counter weight is 49.6 ton.
- Correlation between the number of reeved lines, maximum rated loads, hook weights are shown in the table below.
- Cannot be used with 1 fall.

1. The rated loads are determined according to EN13000 rating with the machine on firm level ground.
2. The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
3. To calculate the maximum load that can actually be lifted, deduct weight of all lifting accessories, such as boom hook and jib hook, from figures shown above.
4. Working radius is the horizontal distance from the slewing center to the center of gravity of a lifted load.
5. The counter weight is 49.6 ton.
6. Correlation between the number of reeved lines, maximum rated loads, hook weights are shown in the table below.
7. Cannot be used with 1 fall.

- The rated loads are determined according to EN13000 rating with the machine on firm level ground.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- To calculate the maximum load that can actually be lifted, deduct weight of all lifting accessories, such as boom hook and jib hook, from figures shown above.
- Working radius is the horizontal distance from the slewing center to the center of gravity of a lifted load.
- The counter weight is 49.6 ton.
- Correlation between the number of reeved lines, maximum rated loads, hook weights are shown in the table below.

- The rated loads are determined according to EN13000 rating with the machine on firm level ground.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- To calculate the maximum load that can actually be lifted, deduct weight of all lifting accessories, such as boom hook and jib hook, from figures shown above.
- Working radius is the horizontal distance from the slewing center to the center of gravity of a lifted load.
- The offset angles shown are of jib boom offset angle against the main boom, under load.
- The counter weight is 49.6 ton.
- Correlation between the number of reeved lines, maximum rated loads, hook weights are shown in the table below.

- The rated loads are determined according to EN13000 rating with the machine on firm level ground.
- The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
- To calculate the maximum load that can actually be lifted, deduct weight of all lifting accessories, such as boom hook and jib hook, from figures shown above.
- Working radius is the horizontal distance from the slewing center to the center of gravity of a lifted load.
- The counter weight is 49.6 ton.
- Correlation between the number of reeved lines, maximum rated loads, hook weights are shown in the table below.
- Cannot be used with 1 fall.

1. The rated loads are determined according to EN13000 rating with the machine on firm level ground.
2. The figures surrounded by bold lines are based on factors other than those which would cause a tipping condition.
3. To calculate the maximum load that can actually be lifted, deduct weight of all lifting accessories, such as boom hook and jib hook, from figures shown above.
4. Working radius is the horizontal distance from the slewing center to the center of gravity of a lifted load.
5. The counter weight is 49.6 ton.
6. Correlation between the number of reeved lines, maximum rated loads, hook weights are shown in the table below.
7. Cannot be used with 1 fall.

1. Max. clamshell rating is 10.0 t.
2. Mass of bucket plus load should not exceed clamshell ratings shown above. Following data are for a general digging application buckets.

Bucket capacity	2.0 m ³	2.5 m ³
Bucket mass	4.5 t	5.5 t

3. In case of clamshell application, a 15.0 m boom is recommended as minimum length of boom, and max. boom length shall not exceed 27.0 m.
4. Apparent specific gravity of lifting material :
Earth 1.7 to 1.8 t/m³
Gravel 1.8 to 2.0 t/m³
5. A 49.6 t counter weight is required for all capacities on these charts.
6. Max. digging depth below ground shall be 36 m.

*5 Opening/closing rope (φ 26 mm × 82 m). The standard length is 21 m for opening/closing and support ropes, and 12 m for excavation ropes.

*6 Required as a tower jib hoisting rope. In the crane jib specification, can also be used as a hoisting rope when using a crane jib or auxiliary sheave.

*7 Support rope (φ 26 mm × 70 m). The standard length is 21 m for opening/closing and support ropes, and 12 m for excavation ropes.

*8 Europe specification machines only.

*9 An operation lever lock is not attached to the front, rear or hoist when the cross operation lever is installed.

*10 The assembly pad is required for the following attachments.

- Crane Boom Longest Length 75m
- Crane Boom Length 72m + Aux. Sheave
- Crane Boom Length 63m + Crane Jib Over 16 m
- Reduction Counter Weight Specification
- Crane Boom Length Over 69 m
- Crane Boom Length Over 57 m + Aux. Sheave

It is not required for the tower attachment.

*11 The reduction counter weight specification can only be used for the crane specification, with the exception of the crane jib.

*12 When using the reeving winch or hydraulic tagline, remove the side frame self assembly quick draw.

*13 (1) Hydraulic tagline (maximum line pull: 2.9 kN (300 kg))

(2) Reeving winch unit (maximum line pull: 11.8 ZkN (1,200 kg))

(3) Reeving winch and hydraulic tagline (maximum line pull: 2.9 kN (300 kg))
